create and share tokens to work on the same file (via third-party hosting)

EXERCISE, A

```
1  teams = ['Chelsea FC', 'Arsenal FC', 'Crystal Palace FC', 'West Ham FC']
```

print out the club names without the `FC` suffix

EXERCISE, A: SOLUTION

```
1  teams = ['Chelsea FC', 'Arsenal FC', 'Crystal Palace FC', 'West Ham FC']
2
3  for t in teams:
4      print(t[:-3])
```

```
Chelsea
Arsenal
Crystal Palace
West Ham
```

The `:` notation: omitting a value is equivalent to taking its max value

`t[0:]` is the same as `t[:]` and `t`

The `:` notation: omitting a value is equivalent to taking its max value

`t[0:]` is the same as `t[:]` and `t`

`t[1:]`: drop the first char

`t[:-1]`: drop the last char

`t[3:-3]`: drop the first three chars and the last three

EXERCISE, B

Print available fruits but not bananas

```
1  fruits = ['apple', 'banana', 'cherry', 'blackcurrant']
```

hint: use `continue`

type it then hover on it to get VS Code help

EXERCISE, B: SOLUTION

Print available fruits but not bananas

```
1 fruits = ['apple', 'banana', 'cherry', 'blackcurrant']
2
3 for f in fruits:
4     if f == 'banana':
5         continue # do nothing
6     else:
7         print(f)
```

```
apple
cherry
blackcurrant
```

EXERCISE, B: ALTERNATIVE SOLUTION

```
1  fruits = ['apple', 'banana', 'cherry', 'blackcurrant']
2
3  for f in fruits:
4      if f != 'banana':
5          print(f)
```

```
apple
cherry
blackcurrant
```

EXERCISE, C

Print available fruits but stop as soon as you find bananas

```
1  fruits = ['apple', 'banana', 'cherry', 'blackcurrant']
```

hint: use `break`

EXERCISE, C: SOLUTION

Print available fruits but stop as soon as you find bananas

It should only print `apple`

```
1  fruits = ['apple', 'banana', 'cherry', 'blackcurrant']
2
3  for f in fruits:
4
5    if f == 'banana':
6      break # jump out of the iteration
7
8    else:
9      print(f)
```

```
apple
```
